MS Segmented Series

Providing Passenger Safety that is Second to None

The Segmented Series of digital position indicators are used for both landing and elevator car fixtures for elevator car position and direction of travel. Powered and controlled by a MX encoder (driver) 3 wire protocol installation is quick and easy. Mounting holes are laid out for the most common types of segmented displays which makes the MS series not only compatible but a more economical product than the competition.

Segmented Series

*The Segmented Series
is your answer to car
and hall PI information*

Features & Benefits

- Current Consumption 30 to 60 (mA)

PI Information

- MX Encoder (driver): 3 wire
- Janus Segmented Displays connect to the following elevator controller serial interface boards:

- *MCE*
- *Elevator Controls*
- *CEC*
- *GAL*
- *Smart Rise*

A range of character sizes including 2.2" , 1.0" and 0.5" formats. The standard red color stands out in any fixture and provides excellent definition, clarity and brightness. Other colors such as green and amber are also available on request. The lens not only protects the LED modules but also masks the electronics behind it with minimum degradation in overall clarity and brightness. Configuration of the floor legends is done through the MX encoder. All displays are capable of displaying alphanumeric characters and most come with a chime interface for ADA compliance.
